

Release Notes Writing Sample

Disclaimer: I adapted this sample from work I created for a previous employer. I removed all proprietary, confidential, and identifying information, and I rewrote portions of the content to ensure it is neutral and appropriate for public use. The original material belongs to that company. I provide this sample solely to demonstrate my writing ability.

All company names, product names, and scenarios in this sample are fictional and used solely for demonstration purposes.

This release notes sample showcases my ability to explain new feature functionality and guide users through a new release in a clear, structured way.

Release Notes, Release 4.5

Product: GivingBridge

Company: SilverTurnip Technologies

Release Date: March 2025

Overview

This release includes new functionality, improves existing functionality, and resolves platform stability and performance.

Framework Updates

This release introduces several platform-level enhancements that strengthen performance, stability, and scalability across the GivingBridge ecosystem.

Upgrade to ST-Core Framework 3.2

GivingBridge now runs on SilverTurnip's ST-Core Framework 3.2. This upgrade improves module isolation, tightens dependency control, and accelerates background job execution across all core services.

Faster API Request Routing

The platform now uses an optimized request-routing layer that reduces latency for high-traffic endpoints. Stress tests show a 20–25% average decrease in response time for lookup and campaign-analytics APIs.

Unified Logging and Telemetry Pipeline

All services now publish structured logs and performance metrics through the TelemetryBridge pipeline. This update improves traceability, strengthens monitoring consistency, and shortens the time required to identify service-level issues.

Database Connection Pool Optimization

Adjustments to the connection-pool parameters reduce idle connections and increase throughput during peak donation periods. This adjustment improves performance during large campaign launches.

Front-End Build System Upgrade

GivingBridge now uses the latest version of SilverTurnip's shared build system. This upgrade reduces build times, shrinks package sizes, and improves caching behavior for returning users.

New Features

Report Framework Updates

In conjunction with the framework updates described above, GivingBridge now includes updates to the following reports. SilverTurnip Technologies rebuilt each report with the latest version of the company's internal reporting engine.

- Activity Ledger
- Engagement Summary
- Outstanding Commitment
- Revenue Projection Report
- Verification Report

Include Planned Gifts in Summaries

GivingBridge now provides an option that controls whether commitments appear in the **Commitments** field on each profile.

SilverTurnip Technologies added a new setting in the Calculation Rules engine that enables or excludes commitments from this total.

- When you enable the setting, GivingBridge adds commitment amount to the **Commitments** field on the **Summary** page for all commitment types.
- When you disable the setting, GivingBridge removes commitment amounts from the **Commitments** field.

After you update the setting, you can run the **Recalculation** workflow to refresh all values in GivingBridge. For more details, refer to the Giving Summaries documentation.

Improvements

- Enhanced load times for the Campaign Dashboard, reducing average page load by approximately 35%.
- Updated the donation form editor with clearer field labels and improved accessibility.
- Improved search accuracy for donor records with partial or multi-word queries.

Bug Fixes

- SLT-GB-02464: Fixed an issue where scheduled campaign emails occasionally failed to send at the correct time.
- SLT-GB-01359: Resolved a problem that caused donor notes to display in the wrong chronological order.
- SLT-GB-05381: Corrected a formatting error in exported donor reports where long organization names wrapped incorrectly.

Known Issues

- Exporting campaign analytics to PDF produces an error if the campaign includes more than 32,767 interactions. SilverTurnip Technologies has scheduled patch SLT-GB-MP042026 to address the issue.
