

Procedural Writing Sample

Disclaimer: I adapted this sample from work I created for a previous employer. I removed all proprietary, confidential, and identifying information, and I rewrote portions of the content to ensure it is neutral and appropriate for public use. The original material belongs to that company. I provide this sample solely to demonstrate my writing ability.

All company names, product names, and scenarios in this sample are fictional and used solely for demonstration purposes.

This procedural sample illustrates my approach to clarity, sequencing, and user-focused instructions.

Set up stage ranges

Administrators use stage ranges to control how long a person remains in each stage of the cultivation process. These ranges help staff identify people who require attention and ensure consistent movement through the pipeline.

About this task

Each stage supports one time range. The range defines two thresholds:

- **Warning threshold** - The number of days a person can remain in the stage before GivingBridge marks the stage as approaching overdue.
- **Overdue threshold** - The number of days a person can remain in the stage before GivingBridge marks the stage as overdue.

When a person reaches either threshold, GivingBridge updates the stage indicator on the record to show the status. Administrators can configure these thresholds to support institutional policies and workflow expectations.

Procedure

1. Open **Administration**, then select **Configuration**.
2. Select **Stage Ranges** to display the list of existing ranges.
3. Select an existing range to update it. If the stage does not have a defined range, select **New** to create one.
4. Select the stage you want to configure.

GivingBridge allows one range per stage. If a range already exists for the selected stage, you cannot create a duplicate.

5. In **Warning Days**, enter the number of days a prospect can remain in the stage before GivingBridge displays a warning.
 - If you enter a value, you must also enter an overdue value.
 - If you leave this field blank and enter only an overdue value, GivingBridge moves the person directly to overdue.

- If the stage represents an end in the lifecycle and should never trigger warnings or overdue states, do not enter a value in either field.
6. In **Overdue Days**, enter the number of days a person can remain in the stage.
 7. Save the record.

Result: GivingBridge updates the total number of days in the stage automatically. To ensure GivingBridge updates the stage status indicators across all people, use the automated pipeline to run the workflow daily.
