

Reference Writing Sample

Disclaimer: I adapted this sample from work I created for a previous employer. I removed all proprietary, confidential, and identifying information, and I rewrote portions of the content to ensure it is neutral and appropriate for public use. The original material belongs to that company. I provide this sample solely to demonstrate my writing ability.

All company names, product names, and scenarios in this sample are fictional and used solely for demonstration purposes.

This reference material highlights my skill in structuring dense information so users can find field descriptions quickly and confidently.

Premium fields

Institutions use premiums to acknowledge contributions or membership activity. Premiums may include tangible items, such as branded merchandise, or intangible benefits, such as invitations to exclusive events. When staff award a premium to a person, GivingBridge records the details of the award and applies any limits defined for the premium.

The following fields appear when an administrator configures a premium in GivingBridge.

Field definitions

Field	Description
Maximum Awarded	Specifies how many times staff may award the premium to a person. Leave this field blank if your institution allows unlimited awards. Use this field to restrict one-time items, such as lifetime recognition pieces. When a person reaches the defined limit, GivingBridge prevents additional awards and displays a message that the limit has been met.
Reassignment Months	Defines the number of months that must pass before staff may award the same premium to the same person. GivingBridge records the date of each award. If staff attempt to award the premium again before the defined period ends, GivingBridge displays a message that the reassignment window has not elapsed.
Owner	Identifies the user responsible for monitoring the premium. If inventory tracking is active and your institution has not defined a notification user or team, GivingBridge assigns low-inventory tasks to the owner. These tasks alert staff when the available quantity reaches the notification threshold so your institution can replenish stock.

Quantity in Warehouse	Indicates the number of premium items currently available for distribution. This field is required when inventory tracking is active. GivingBridge uses this value to calculate availability and determine when to trigger low-inventory notifications.
Notification Amount	Specifies the minimum number of items your institution wants to keep in stock. When the quantity on hand reaches or falls below this value, GivingBridge creates a task for the designated notification user, notification team, or premium owner. If this field is blank, GivingBridge does not generate low-inventory notifications.
